

Silver (I) Fluoride

Description

Silver (I) Fluoride is a strong oxidizing agent which reacts with both acids and bases. It has strong ionic bonds and high solubility in water when compared to other silver halides. Commonly used in industrial and medical applications where antimicrobial properties are desired.

Properties	Units
Chemical Name	Silver (I) Fluoride
CAS Number	7775-41-9
Molecular Formula	AgF
Molecular Weight	126.87 g/mol
Synonyms	Silver monofluoride
Product Specifications*	>99%
Packaging format	Amber HDPE Bottles
